Malawi HIV prevalence

- Prevalence of HIV in Malawi estimated at 10.6% in 15-64 years population
- 12.8% for females and 8.2% for males
- This equates to approx. 900,000 PLHIV in 15-64 years age group

Source: MPHIA 2016

Malawi - Estimated AIDS deaths and ART scale-up

Heavily donor dependent

A 2012 study identified that Malawi would require almost 8% of its GDP to maintain its HIV position population on ART.

This makes Malawi the most dependent country in the world for outside funding for its treatment program.

GMS assignments

- Grant making
- Establishment of dedicated program implementation unit (PIU) in the MOH
 - Financial management and reporting system
 - Operational manuals and guidelines
 - Training and orientation of PIU staff

Malawi MOH grants

Grant Values (2016-2017)

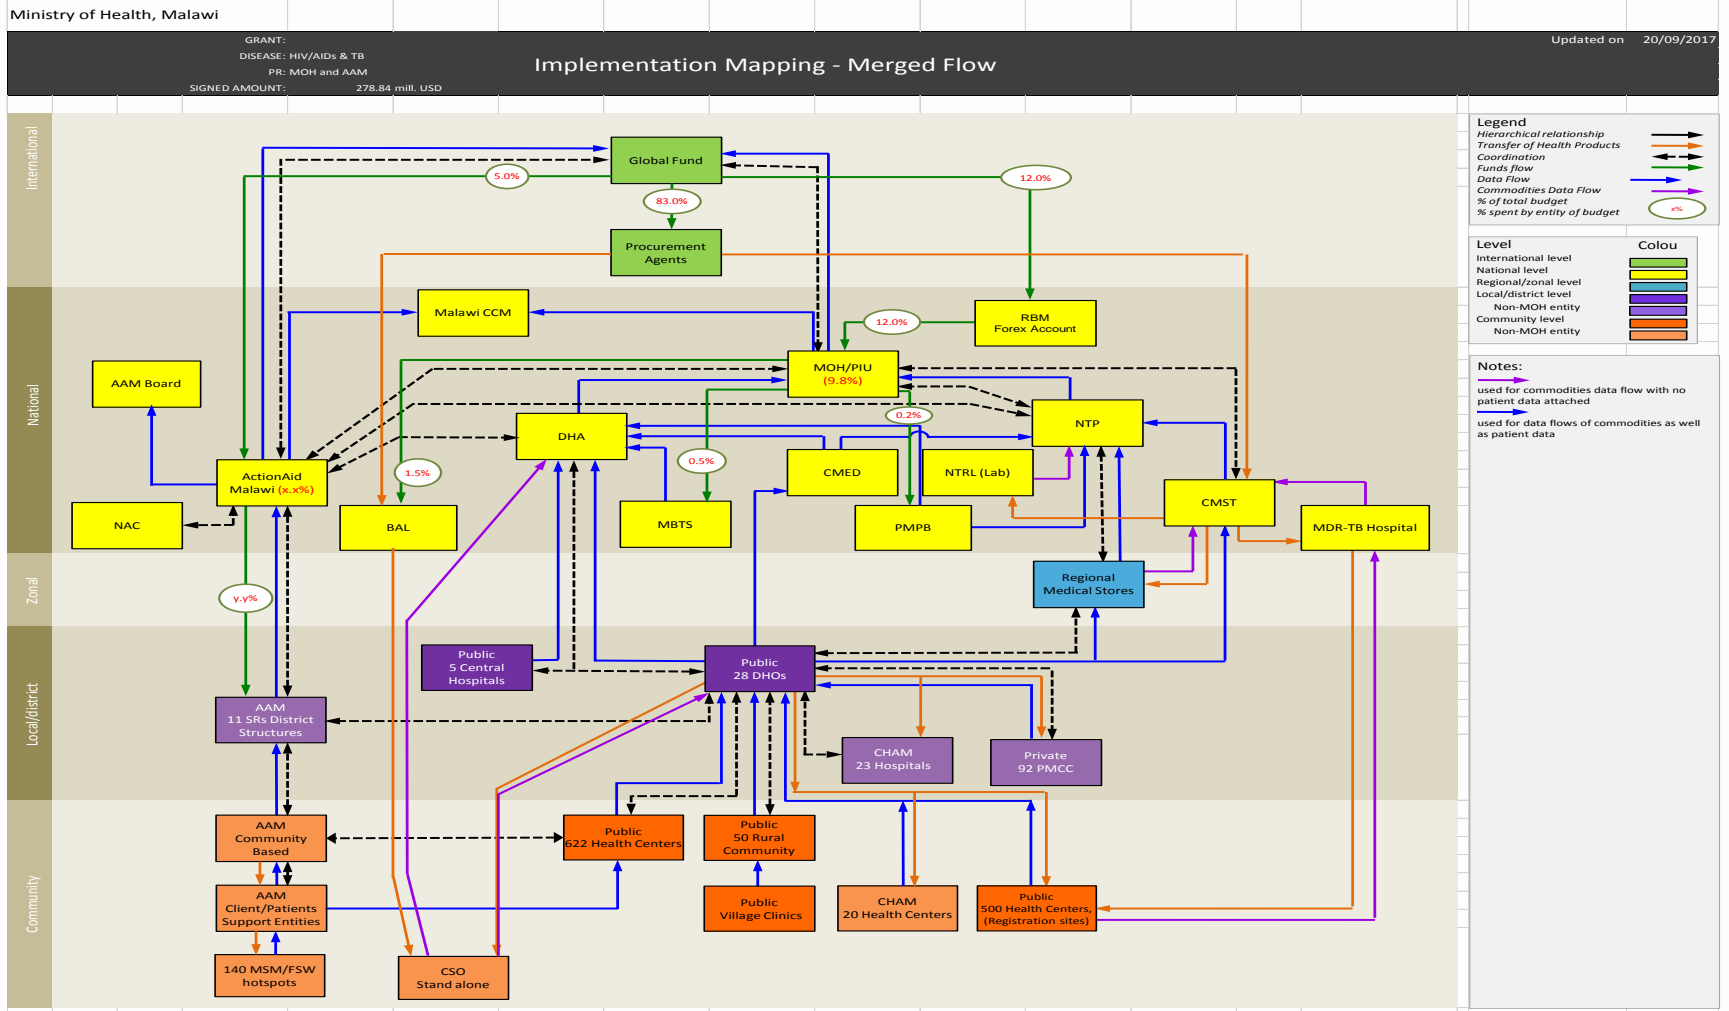

TB/HIV:
\$285.2 million

Malaria:
\$26.4 million
